

**For Immediate Release**

**Miklens Bio Pvt. Ltd. collaborates with Indus Valley Fertilisers Pvt. Ltd. to promote  
“Residue Free Cultivation” in Kerala**

**Bengaluru, January 19, 2017:**

Miklens Bio Pvt Ltd, a technology driven Agri-biotechnology company formed by a group of scientist and professionals with a vision to substitute chemical fertilizers and pesticides through advanced Microbial fermentation/Secondary metabolite technology. To promote Residue Free Cultivation in Kerala, Miklens Bio Pvt. Ltd. has joined hands with Indus Valley Fertilisers Pvt. Ltd. and will help them with the technical aspects of the products.

This partnership will garner positive response from the farmer community and the agri industry as a whole. Jointly, they intend to bring about a revolution in the agricultural canvas of India. The products are developed keeping in mind the essence of Kerala State and its vision to go organic completely by the year 2020. This tie-up will provide a reliable and sustainable alternative to conventional (usage of chemical) farming methods. It leaves no residue in the air, soil or water, and thus it, by far, provides the safest method for practising agriculture. It also helps in protecting crops and enhances growth.

Indus Valley Fertilisers Pvt. Ltd. has been instrumental in bringing about a change in the way agriculture is practised in Kerala and with the tie-up, Indus Valley is determined and focussed to achieve the same.

Mr. Santosh Nair (Founder and MD – Miklens Bio Pvt. Ltd.) said that this partnership will benefit the farmers as they can increase their profitability and productivity.

Mr. V. V. Muhammed (MD – Indus Valley Fertilisers Pvt. Ltd.) shared that farmers now have an alternative to products which are world-class and it will make a positive difference to the organic vision of India.

**About the Company:**

Miklens Bio Pvt. Ltd. is an RnD company in the bio-agri input domain, started in August 2016, with a view to change the agricultural landscape of India by providing avenues for Residue Free Cultivation. Miklens Bio manufactures its products with microbes as our backbone, which are available freely in the atmosphere.

Miklens Bio is instrumental in developing solutions for a better future by manufacturing bio-agri inputs which are safe for the environment and the society at large. Miklens Bio has a clear goal – to help solve the global food security problem and to provide a safe and healthy alternative to farm ing.

Miklens Bio has focussed its efforts in this direction to come up with viable solutions to these global problems and hence we are engaged in researching and developing products which helps in plentiful growth of crops and consequently works in favour of the environment. Miklens Bio strongly advocates the philosophy of responsible agricultural practices. Its technology portrays the idea of “Farming with naturally driven microbes” with a goal to reduce the dependence on toxic chemical pesticides.
